

A CNC mill has an operating body: 47 logged channels, about 8 intrinsic dimensions

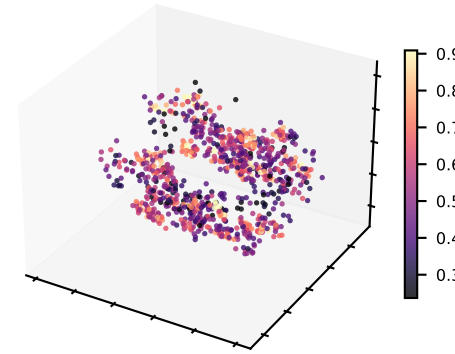

a the tool path in space
(3 of 47 channels)

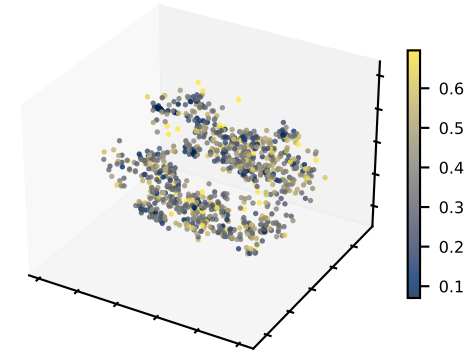

b local dimension

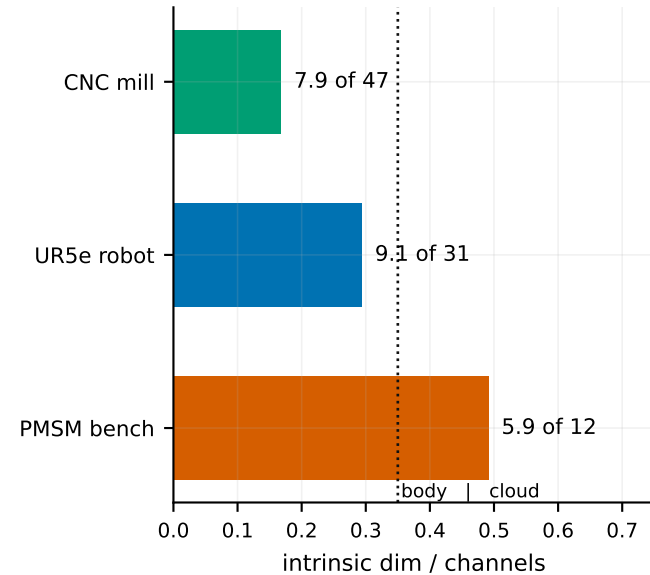

c curvature

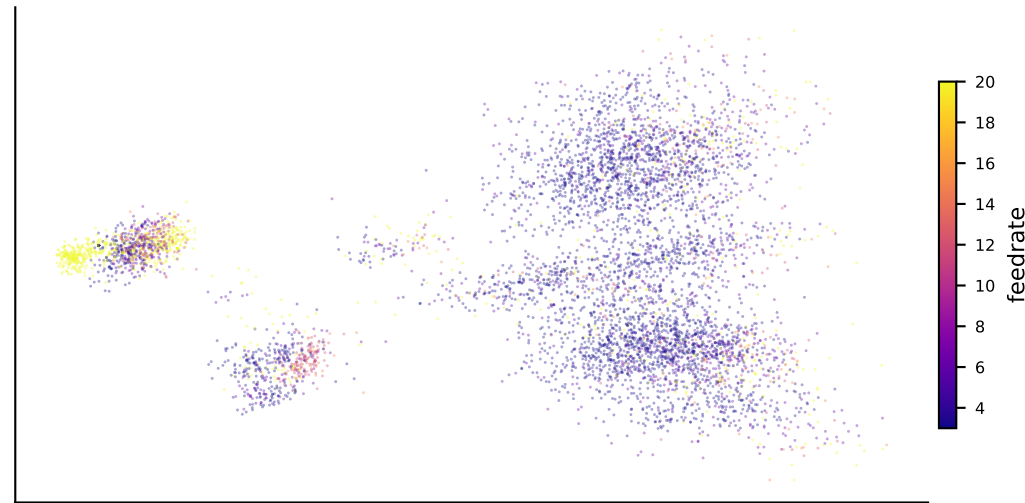

d speed along the body

e which machines have a body

f all 18 runs of the same program on one body.
Feedrate moves where the run sits on it (decoded at $R^2 = 0.91$)

g one clear win, two failures
